                                                                     The invention relates to solid supports, functionalized for the synthesis of compounds having an alpha-oxo-aldehyde group, a process for the synthesis of such compounds. The invention also covers peptides having an alpha-oxoaldehyde group situated in a position other than a N-terminal extremity and not being linked through amide to an amine on a side chain of lysine or ornithine, prepared using a support of the invention. This sequence represents an example of a peptide used in the method of the invention. Solid phase synthesis of alpha-oxoaldehyde peptides and other organic molecules such as non-peptidic derivatives of glyoxylic acid. Such products are themselves useful in the pharmaceutical industry for synthetic vaccines, synthesis of macromolecules, and microtitration
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a novel peptide immunogen comprising a helper T cell (Th) epitope, an N-terminal fragment of amyloid beta helper T cell (Th) epitope, in N-terminal fragment of amyloid beta consisting of tresidues 1-42) linked to the epitope and optionally a spacer consisting of at least an amino acid to separate the immunogenic domains. Sequences of the invention are useful for preventing or treating halteimer's disease (Ab) in a mammal, to produce antibodies to Abeta peptide that is cross-reactive to soluble Abeta peptides and brain tissue plaques formed from it. They are useful for aliciting a site-directed mutagenesis against the main functional/regulatory site of the Abeta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel peptide immunogen comprising a helper T cell epitope, an N-terminal fragment of amyloid beta peptide linked to the epitope, and optionally a spacer, useful for preventing or treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Immunogen, helper T cell, Th epitope, amyloid beta, Alzheimer's disease, Abeta, AD; brain tissue plaque; immunoneutralisation, neuroprotective;
                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to diagnosing Type-1 diabetes in a subject, comparising obtaining a biological sample comprising T-cells from a subject, contacting a biological sample in vitro with a proinsulin peptide and detecting the ability of the proinsulin peptide to preferentially stimulate the T-cells of diabetic patients by measuring the ability of the T-cells to proliferate or ability of the T-cells to proliferate or ability of the T-cells to produce cytokines. The method is useful for diagnosing Type-1 diabetes in a subject. The diagnosis method is rapid and accurate. The present sequence represents a tetanus toxoid peptide used as a control in an experiment designed to detect proinsulin peptide reactive T-cells in the
peptide and for generating antibodies, which are highly cross-reactive to the soluble Abeta peptide and the amyloid plaques formed in the brain of Alzheimer's disease patients. The sequences are useful for induction of accelerated clearance of amyloid plaques and immunoneutralisation of the soluble Abeta derived toxins in the brain to prevent and treat Alzheimer's disease. They are also useful as vaccines. The present sequence is Clostridium tetani T helper (Th) cell epitope used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Diagnosing Type-1 diabetes, by contacting patient sample comprising T-cells with proinsulin peptide and detecting the ability of peptide to stimulate T-cells by measuring ability of T-cells to proliferate or

The invention relates to a novel peptide represented by formula (I) given below. The new peptide is represented by formula (I): (A) n - (Th) m - (B) o -Abeta(4-10). (C) p where each of A, B and C are an amino acid residue or sequence of amino acid residues; n, o or p = 0-20, when o is 0 then Th is directly connected to the B cell epitope Abeta(4-10) through a peptide of that tomprises a helper T cell epitope or its immune enhancing analogue that comprises a helper T cell epitope or its immune enhancing analogue or segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment; m = 0-5; Abeta(4-10) is Phe-Arg-His-Asp-Ser-Gly-Tyr cor segment in the Parain of an individual afflicted with Alzheimer's disease, disaggregating the amyloid dibrils in the brain of an individual afflicted with Alzhei
                                                                                                                                                                                                                                                                                                                                                                                                                 amyloid beta, Abeta(4-10); helper T cell epitope, neuroprotective;
nootropic; Alzheimer's disease; amyloid deposit; brain; amyloid fibril.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New immunogenic peptide Abeta(4-10), useful in preparing a composition for treating Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          inhibitor of amyloid deposition and fibril formation. The present sequence represents a helper T cell epitope peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The invention describes a method of detecting an indicator (I) of type I diabetes in a subject. The method comprises obtaining a biological sample from the subject, contacting the sample with a proinsulin peptide compound (II) which stimulates an immunological response by T cells of type I diabetic subjects and detecting an immunological activity in the sample against (II) in the subject. The method is useful for detecting an indicator of type I diabetes in a subject. Also described is a method is useful for inhibiting the development or progression of type I diabetes in a subject. This is the amino acid sequence of a tetanus toxoid peptide associated with the study of proinsulin peptide reactive T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Detecting indicator of type I diabetes in subject, by contacting sample with proinsulin peptide compound stimulating immunological response, detecting immunological activity in sample against proinsulin peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Micelle, microaggregate; induction; immune response; lipopeptide; cytotoxic T-lymphocyte; epitope; lipid; helper T-lymphocyte; HTL; tetanus; toxin; vaccine; HIV; hepatitis B virus; papilloma virus; melanoma; Plasmodium falciparum; malaria.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides a method for generating virus-like particle (VLP) vaccines in an adaptable, predictable, stable and scaleable manner.

Methods are provided for making vaccines made of re-assembled VLPB.

C First, the VLPB are disassembled into encapsidation intermediate

C First, the VLPB are disassembled into encapsidation intermediate

C Formal conjugation of unique peptide or nucleic acid moieties to form

Separate populations. A predetermined amount of each of the several (one

or more) different encapsidation intermediates from the different

C populations is mixed and joined, forming intext VLPB, surrounding a

c nucleic acid core, that are composed of different encapsidation

c nucleic acid core, that the reassembled VLP displays more than one

peptide or nucleic acid. The nucleic acid can function as a scaffold and

c can also be engineered to express an immunomedulatory protein in a

c eukaryotic cell. The VLP is useful as a vaccine against viral or

Dacterial pathogens, an anti-allergy medication, and a diagnostic reagent

or a combinatorial chemistry reagent (all claimed). Tobacco mosaic virus

(TMV) was used as a VLP carrier in examples from the invention, in which

copitope sequences were fused in-frame to the TMV UI coat protein. TMV

CC VLPS were reassembled in vitro decorated with a single epitope

(monovalent) or with a collection of different epitopes (multivalent).

The present sequence is that of teanus toxoid immunostimulatory peptide,

                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                              The invention relates to the generation of mixed micelles or microaggregates for inducing an immune response comprise: (a) a first lipopeptied comprising at least one CTL (cytotoxic T-lymphocyte) epitope and at least one lipid unit; and (b) a second lipopeptied comprising at least one HTL (helper T-lymphocyte) epitope and at least one lipid unit different from that of the first lipopeptide. This peptide represents an example of a lipopeptide epitope used in the invention and is derived from HIV-1. The immunogenic lipopeptide micelles are used in vaccines, especially against HIV, hepatitis B virus (HBV), papilloma viruses, p53, melanoma or Plasmodium falciparum malaria
                                                                                                                                Immunogenic lipopeptide micelles - comprising lipopeptides containing cytotoxic and helper T\textsubscript e epitopes.
                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     18

The specification describes a process for binding a peptide to a lipophilic vector having an aldehyde function, through formation of a hydrazone, in solution. The lipophile is non-peptidic and is of a formula given in the specification. The lipid-peptide bond is stable and the process is simpler to carry out than known methods, being in solution with a totally deprotected peptide. The method is used for cell screening and targeting of hormones and neuropeptides through physiological barriers e.g. cell membranes. The present peptide is functionalised by alpha-hydrazinoacetyl groups, and is used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a new pharmaceutical composition comprising a unit dose form of a peptide, or analogue, comprising an epitope selected from those represented by peptides AAY98812-Y99339 which are derived from various antigens for various human leucocyte antigen class DR molecules, representative of the world wide population. The peptide/analogue binds to an HLA class II molecule at an IC-50 of less
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New compositions containing immunogenic peptide epitopes for various HLA class II DR molecules useful for inducing helper T cell response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human leucocyte antigen; HLA class II; antigen epitope; pharmaceutical; immune response; chronic viral disease; cancer; autoimmune disease; rheumatoid arthritis; multiple sclerosis; myasthenia gravis; AIDS; allograft rejection; allergy; lyme disease; hepatitis; prostate cancer; glomerulonephritis; food hypersensitivity; malaria.

than or equal to 1,000 nM. The pharmaceutical can be used to induce a helper T cell response. The pharmaceutical focuses the immune response covards selected determinants and could therefore be used in cases of chical diseases and cancer. Examples of diseases that can be tracted using the peptide containing pharmaceutical include autoimmune diseases (rheumatoid arthritis, multiple solerosis, and myssthenia gravis), allograft rejection, allergies, lyme disease, hepatitis, poststreptococcal endocarditis or glomerulonephritis and food streptococcal endocarditis or glomerulonephritis and food streptococcal endocarditis or glomerulonephritis and food responses against other immunogens administered with the peptides. Diseases which can be treated using immunogenic mixtures include prostate cancer, hepatitis B, hepatitis C, AIDS, renal carcinom, cravical carcinom, lymphoma, and condyloma acuminatum. The peptides may also be used to make monoclonal antibodies useful as potential diagnostic or therapeutic agents. The peptides may be useful as diagnostic crasgents, for example, to determine the susceptibility of an individual condyloma the susceptibility of an individual condyloma the susceptibility of an individual condyloma the susceptibility of an individual condyloma the susceptibility towards conserved development of epitope based vaccines particularly towards conserved conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility towards conserved contained the susceptibility to the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       variability such as HIV, HCV and Malaria

Stabilized pharmaceutical containing N-terminal glutamic acid or glutamine, useful e.g. in anti-melanoma vaccines, is an addition salt with strong acid.

Claim 9; Page 136; 149pp; French.

The present invention describes a pharmaceutical compound (I) that contains an N-terminal glutamic acid (Glu) or glutamine (Gln) residue in the form of an addition salt with a strong, physiologically acceptable acid (II). Also described are: (a) a pharmaceutical composition acid (II). Also described are: (a) a vaccine containing at least one (I) (b) a vaccine containing at least one (I) where this is a major histocompatibility complex (MFC) ligand (Ia); (c) a method for in vitro diagnosis of diseases associated with the presence of (Ia); (d) a kit for method (c) that includes a (Ia); and (e) a process of the preparing (I). (I) has immunomedulator, endocrine, antiallargic, neuroprotectant, virucidal, bactericidal, antiparastic, fungicidal and cytostatic activities. (I) are useful, in human or veterinary medicine, imparanceutical compositions (for treating immune disorders, e.g. immune deficiency, autoimmune states, hypersensitivity, allergy, graft rejection, infection, hormonal disorders and central nervous system creatment or prevention of: (I) viral, bacterial, parastic or fungal infections; or (ii) of cancers. A patricular application is in antimications, or (ii) of cancers. A patricular application is in antimuland associated with interactions between MHC and (I), e.g. melanoma and human immunodeficiency virus infection. AMM98898 to AMM98952 represent invention clamunodeficiency virus infection. Compounds from the present invention

Maleimide cluster comprising core molecule, carbohydrate core, cholic acid core, useful as template for assembling multivalent peptide.

Example 9; Fig 10; 63pp; English

that induces an immunogenic response against residues 1-3 to 7-11 of Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The methods are useful for prophylactic and therapeutic treatment of

The invention relates to a maleimide cluster for multivalent peptide synthesis. The maleimide cluster can comprise a core to which five or more maleimides are each attached via a linker, or it can comprise a carbohydrate or cholic acid core to which two or more maleimides are eached attached via a linker. The invention also relates to a multivalent peptide or protein comprising a maleimide cluster with identical or different peptides or proteins covalently attached to the maleimide, production of a multivalent peptide or protein; methods of vaccination, peptide drug delivery or drug targeting using the maleimide cluster; and methods of raising polyclonal or monoclonal antibodies using the maleimide cluster; and maleimide cluster. The maleimide cluster is useful as a template for the assembly of multivalent peptides. These may be used in vaccination, for peptide drug delivery or for studying protein folding. A targeting protein may also be attached to maleimide clusters to facilitate the targeting of a compound to specific cells or organelles. The present cargeting of a compound to specific cells or organelles. The present maleimide cluster in an example of the invention. ö Amyloid deposit; APP; Abeta; brain; human; clearing response; nootropic; Fc receptor mediated phagocytosis; immunogenic response; neuroprotective; amyloid precursor protein; Alzheimer's disease.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method of preventing or treating a disease associated with amyloid deposits of amyloid precursor protein (APP) Abeta fragments in the brain of a patient, which comprises administering to the patient: (a) an antibody that binds to Abeta, the antibody binds to an amyloid deposit and induces a clearing response (Foreceptor mediated phagocytosis) against it (b) a polypeptide containing an N-terminal segment of at least residues 1-5 of Abeta; or (c) an agent that induces an immunogenic response against residues 1-3 to 7-11 of Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The methods are useful for prophylactic and therapeutic treatment of

```

This invention describes a novel method of preventing or treating a disease associated with amyloid deposits of amyloid precursor protein (APP) Abeta fragments in the brain of a patient, which comprises administering to the patient: (a) an antibody that binds to Abeta, the antibody binds to an amyloid deposit and induces a clearing response (For receptor mediated phagocytosis) against it (b) a polypeptide containing an N-terminal segment of at least residues 1-5 of Abeta; or (c) an agent

Preventing or treating a disease associated with amyloid deposits, especially Alzheimer's disease, comprises administering amyloid specific

This invention describes a novel method of preventing or treating a disease associated with amyloid deposits of amyloid precursor protein (APP) Abeta fragments in the brain of a patient, which comprises administering to the patient: (a) an antibody that binds to Abeta, the antibody binds to an amyloid deposit and induces a clearing response (Fc receptor mediated phagocytosis) against it (b) a polypeptide containing an N-terminal segment of at least residues 1-5 of Abeta, or (c) an agent that induces an immunogenic response against residues 1-3 to 7-11 of Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The methods are useful for prophylactic and therapeutic treatment of Alzheimer's disease
                                                                               Amyloid deposit; APP; Abeta; brain; human; clearing response; nootropic; Fc receptor mediated phagocytosis; immunogenic response; neuroprotective; amyloid precursor protein; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Preventing or treating a disease associated with amyloid deposits, especially Alzheimer's disease, comprises administering amyloid specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antiparkinsonian, antibody therapy, Lewy body, alpha-synuclein; aggregation; brain, immunogenic response; beta-amyloid;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fusion protein #15 for treating neurodegenerative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 22;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disease associated with amyloid deposits of amyloid precursor protein (APP) Abeta fragments in the brain of a patient, which comprises antibody bate fragments in the brain of a patient, which comprises antibody binds to the patient: (a) an antibody that binds to Abeta, the antibody binds to an amyloid deposit and induces a clearing response (FC receptor mediated phagocytosis) against it (b) a polypeptide containing that induces an immunogenic response gainst residues 1-5 of Abeta; or (c) an agent that induces an immunogenic response against residues 1-3 to 7-11 of Abeta. The products of the invantion have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                 Amyloid deposit; APP; Abeta; brain; human; clearing response; nootropic; Fc receptor mediated phagocytosis; immunogenic response; neuroprotective; amyloid precursor protein; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Preventing or treating a disease associated with amyloid deposits, especially Alzheimer's disease, comprises administering amyloid specific antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel method of preventing or treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The invention relates to a method of preventing (M1) or treating a disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, by administering an agent that induces an immunogenic response against alpha-synuclein and/or beta-amyloid (Abeta) to a patient. (M1) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration improves motor characteristics of the patient. Alpha-synuclein or Abeta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alphasynuclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Preventing or treating disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in brain by administering agent that induces immunogenic response against alpha-synuclein and/or
                                                                    or treating disease such as Parkinson's disease characterized
                                                                                            Lewy bodies or alpha-synuclein aggregation in brain by administering ant that induces immunogenic response against alpha-synuclein and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antiparkinsonian; antibody therapy; Lewy body; alpha-synuclein; aggregation; brain; immunogenic response; beta-amyloid; Parkinson's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ð
                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of preventing (M1) or treating a disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, by administering an agent that induces an immunogenic response against alpha-synuclein and/or beta-amyloid (Abeta) to a patient. (M1) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration improves motor characteristics of the patient. Alpha-synuclein or Abeta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alphasynuclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The invention relates to a method of preventing (M1) or treating a disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, by administering an agent that induces an immunogenic response against alpha-synuclein and/or beta-amyloid (Abeta) to a patient. (M1) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration improves motor characteristics of the patient. Alpha-synuclein or Abeta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alpha-synuclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAY92650-55 are peptides designed which correspond to the P2 and P30 epitopes with 5 flanking human prostate specific membrane antigen (hPSM) amino acids in each end. The flanking amino acids correspond to the epitope insertion sites 6, 8 and 10. The peptides will be used in, e.g. T cell proliferation assays, but also for ELISA or other in vitro assays. The claims detail a method for inducing immune responses against weakly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Inducing immune responses to weakly immunogenic, tumor associated peptide antigens for the treatment of breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Foreign epitope, P2; prostate specific membrane antigen; vaccination; cytotoxic T-lymphocyte immunity; self-protein; cancer; breast cancer; prostate cancer; cell-associated peptide antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Dalum I;

          associated with cancers (i.e. self-proteins), for example, heSM, heregulin 2 (Her2) and/or fibroblast growth factor 8b (FGF8b). The method comprises effecting shuultaneous presentation by antigen producing calls (APCs) of the animals immune system of: (1) at least 1 CTL (cyctoxic Tlymphocyte) group derived from the PA and/or at least 1 B-cell group derived from the cell-associated PA; and (2) at least 1 first T helper cell group which is foreign to the animal. Analogues of human PSM, human Her2 and human/murine FGF8b comprising a substantial part of all known and predicted CTL and B-cell epitopes of the respective PA and including at least one foreign T helper epitope (eg. P2 and/or P3) are also claimed. The method is used to treat prostate, prostate/breast or breast cancer when the PA is human PSM, FGF8b and Her2, respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Inducing immune responses to weakly immunogenic, tumor associated peptide antigens for the treatment of breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAY92650-55 are peptides designed which correspond to the P2 and P30 epitopes with 5 flanking human prostate specific membrane antigen (hPSM) amino acids in each end. The flanking amino acids correspond to the epitope insertion sites 6, 8 and 10. The peptides will be used in, e.g. cell proliferation assays, but also for BLISA or other in vitro assays. The claims detail a method for inducing immune responses against weakly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Foreign epitope; P2; prostate specific membrane antigen; vaccination; cytotoxic T-lymphocyte immunity; self-protein; cancer; breast cancer; prostate cancer; cell-associated peptide antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Dalum I;

immunogenic cell-associated peptide antigens (PA) such as those associated with cancers (i.e. self-proteins), for example, hPSM, hArsequin 2 (Herz) and/or fibroblast growth factor 8b (FGFBb). The method comprises effecting simultaneous presentation by antigen producing cells (APCB) of the animals immune system of: (1) at least 1 GTL (cytotoxic T-lymphocyte) group derived from the PA and/or at least 1 first T helper derived from the ell-associated PA; and (2) at least 1 B-cell group derived from the ell-associated PA; and (2) at least 1 first T helper cell group which is foreign to the animal. Analogues of human PSM, human Herz and human/murine FGFBb comprising a substantial part of all known and predicted CTL and B-cell epitopes of the respective PA and including at least one foreign T helper epitope (e.g. P2 and/or P30) are also claimed. The method is used to treat prostate, prostate/breast or breast cancer when the PA is human PSM, FGFBb and Herz, respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY92650-55 are peptides designed which correspond to the P2 and P30 epitopes with 5 flanking human prostate specific membrane antigen (hPSM) amino acids in each end. The flanking amino acids correspond to the epitope insertion sites 6, 8 and 10. The peptides will be used in, e.g. T cell proliferation assays, but also for ELISA or other in vitro assays. The claims detail a method for inducing immune responses against weakly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Inducing immune responses to weakly immunogenic, tumor associated peptide antigens for the treatment of breast and prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Foreign epitope, P2, prostate specific membrane antigen, vaccination, cytotoxic T-lymphocyte immunity, self-protein, cancer, breast cancer, prostate cancer, cell-associated peptide antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Dalum I;

            associated with cancers (i.e. self-proteins), for example, hPSM, heregulin 2 (Her2) and/or fibroblast growth factor 8b (FGF8b). The method comprises effecting simultaneous presentation by antigen producing cells (APC9) of the animals immune system of: (1) at least 1 CTL (cytotoxic Tlymphocyte) group derived from the PA and/or at least 1 B-cell group derived from the cell-associated PA; and (2) at least 1 first T helper cell group which is foreign to he animal. Analogues of human PSM, human Her2 and human/murine FGF8b comprising a substantial part of all known at least one foreign T helper epitopes of the respective PA and including at least one foreign T helper epitope (e.g. P2 and/or P30) are also claimed. The method is used to treat prostate, prostate/breast or breast cancer when the PA is human PSM, FGF8b and Her2, respectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel pharmaceutical composition for preventing or treating a disease characterised by amyloid fibril deposits (amyloid plaques) in a patient. The pharmaceutical composition comprises an agent that will induce an immune response against an amyloid component, or an antibody or antibody fragment that binds to an amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Amyloid disease; amyloid fibril deposition; amyloid plaque; immunogenic; antibody; vaccine; Alzheimer's disease; type 2 diabetes; reactive system amyloidosis; systemic senile amyloidosis; familial amyloid cardiomyopathy; transmissible spongiform encephalopathy; creutzfeld-Jakob disease; Kuru; haemodialysis-asssociated bara-2-mioroglobulin deposition; amyloid beta peptide; universal T-cell epitope; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pharmaceutical composition comprising immunogen against amyloid component such as fibril peptide or protein, or antibody against amyloid component useful for treating amyloid diseases or amyloidoses.
                                                                                                                                                                                                                                                                                                                                                                      Gарв

Component. The invention area of a meritod for detailming the prognosis of a patient undergoing treatment for an amyloid disorder which involves measuring a patient serum amount of immunoreactivity against a selected amyloid component. A patient serum immunoreactivity of at least four times a base line serum immunoreactivity control level indicates a prognosis of improved status with respect to the disorder. The pharmaceutical compositions of the invention are useful for treating a wide variety of disorders include Alzheimer's disease characterised by actient. Such disorders include Alzheimer's disease characterised by amyloid beta peptide (ibril deposits; type 2 diabetes characterised by islet amyloid protein peptide (IAPP, amylin) fibrils; reactive systemic amyloid obeta peptide (ibril deposits; type 2 diabetes characterised by tislet amyloid serum amyloid A protein (inflammatory diseases (e.g., cheumatoid arthritis, osteomyelitis, tuberculosis) characterised by AATTR fibrils derived from serum amyloid A protein (ApoSSA); systemic senile amyloidssis and familial amyloid cardiomyopathy characterised by ATTR fibrils derived from transthyretin (TTR); transmissible spongiform cencephalopathies (e.g., creutzfeld-Jakob disease, Kuru) characterised by C prion protein deposits; and beta-2-microglobulin deposits which form as a represents an immunogenic fusion protein comprising an amyloid beta composition to treat or prevent Alzheimer's disease. (Updated on 11-SEP-composition to treat or prevent Alzheimer's disease. (Updated on 11-SEP-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
component. The invention also relates to a method for determining the

stimulator is linked to apptide or protein hapten containing a cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes oncent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous immune response to the coupled peptide in members of a heterogeneous companied diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequence from the invasin protein of Yersinia. Spacer amino acid comains and between the immune stimulators and hapten components. When the hapten components when the hapten components when the immune stimulators and hapten components. When the invasin domain can be omitted from the immune stimulator component. The present sequence represents an LHRH-containing, invasin-free immunogenic peptide as a bove which can be used as a potent vaccine for treating e.g. prostatic hyperplasia, androgendence archoma, prostatic archoma, testicular carchoma, cancer, or for induction of infertility. This sequence is particularly preferred. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                             Synthetic immunogenic peptides are provided in which a universal immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic peptide-based immunogen contg. IgE CH4 peptide and helper T cell epitope - useful for eliciting antibody prodn. for allergy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              IgE; CH4; immunoglobulin; epsilon; immunogen; helper T cell; epitope; vaccine; allergy; antibody; constant heavy chain.

The invention relates to a novel pharmaceutical composition for preventing or treating a disease characterised by amyloid fibril deposits (amyloid plaques) in a patient. The pharmaceutical composition comprises an agent that will induce an immune response against an amyloid component, or an antibody or antibody fragment that binds to an amyloid component. The invention also relates to a method for determining the prognosis of a patient undergoing treatment for an amyloid disorder which
            AAR82592-R82600 and AAR83560-R83581 are peptide immunogens that are useful in vaccines for treating allergic reactions. In the immunogens, an IgE CH4 peptide is attached C-terninally to a series of amino acids including a helper T cell epitope. The immunogen may also opt. contain a fatty acid or fatty acid derivative, an invasin domain or alpha-NH2. The immunogen produces high titres of antibodies to the effector site in human IgE heavy chain (the CH4 domain peptide) which inhibit mast cell activation and reduce allergen-induced IgE prodn. The immunogens may be used in either a radially branching multimeric form or a linearly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Amyloid disease; amyloid fibril deposition; amyloid plaque; immunogenic; antibody; vaccine; Alzheimer's disease; type 2 diabetes; reactive system amyloidosis; systemic senile amyloidosis; familial amyloid cardiomyopathy; transmissible spongiform encephalopathy; Creutzfeld-Jakob disease; Kuru;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pharmaceutical composition comprising immunogen against amyloid component such as fibril peptide or protein, or antibody against amyloid component useful for treating amyloid diseases or amyloidoses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amyloid beta/tetanus toxoid immunogenic fusion peptide, SEQ ID NO:10.
                                                                                                                                                                                                                                                                                                      Gaps

cc involves measuring a patient serum amount of immunoreactivity against a selected amyloid component. A patient serum immunoreactivity of at least four times a base line serum immunoreactivity control level indicates a prognosis of improved status with respect to the disorder. The prognosis of improved status with respect to the disorder. The patient of improved status with respect to the disorder. The patient of disorders characterised by anyloid beta peptide fibril depositis; type 2 disbetes characterised by attent. Such disorders include Alzheimer's disease characterised by amyloid beta peptide fibril deposits; type 2 diabetes characterised by amyloid beta peptide fibril deposits; type 2 diabetes characterised by anyloid protein peptide (IAPP, amyloin fibrils, reactive systemic myloidosis associated with systemic inflammatory diseases (e.g., amyloidosis and familial amyloid cardiomyopathy characterised by ATTR cfibrils derived from serum amyloid ardiomyopathy characterised by ATTR clibrils derived from transthyretin (TTR); transmissible spongiform encephalopathies (e.g. Creutzfeld-Jakob disease, Kunl) characterised by Creutsent of long term haemodialysis treatment. The present sequence represents an immunogenic fusion protein comprising an amyloid beta composition to treat or prevent Alzheimer's disease. (Updated on 11-SEP-COMPOSITION to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pharmaceutical composition comprising immunogen against amyloid component such as fibril peptide or protein, or antibody against amyloid component useful for treating amyloid diseases or amyloidoses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Amyloid disease; amyloid fibril deposition; amyloid plaque; immunogenic; antibody; vaccine; Alzheimer's disease; type 2 diabetes; reactive system amyloidosis; systemic senile amyloidosis; cramilial amyloid cardiomyopathy; transmissible spongiform encephalopathy; transmissible spongiform encephalopathy; haemodialyais-asssociated beta-2-microglobulin deposition; amyloid beta peptide; universal T-cell epitope; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Amyloid beta/tetanus toxoid immunogenic fusion peptide, SEQ ID NO:13.

The invention relates to a novel pharmaceutical composition for preventing or treating a disease characterised by amyloid fibril deposits camyloid plaques) in a patient. The pharmaceutical composition comprises an agent that will induce an immune response against an amyloid component, or an antibody or antibody fragment that binds to an amyloid component. The invention also relates to a method for determining the prognosis of a patient undergoing treatment for an amyloid disorder which involves measuring a patient serum amount of immunoreactivity against a prognosis of apatient the serum immunoreactivity of at least four times a base line serum immunoreactivity of at least four times a base line serum immunoreactivity of at least four times a base line serum immunoreactivity control level indicates a prognosis of improved status with respect to the disorder. The prognosis of improved status with respect to the disorder. The wide variety of disorders include Alzheimer's disease characterised by adient. Such disorders include Alzheimer's disease characterised by amyloid beta peptide fibril deposite; type 2 diabetes characterised by amyloid dathritis, osteomyelitis, tuberculosis) characterised by AA fibrils derived from serum amyloid A protein (ApoSAA); systemic semile amyloid serum amyloid A protein (ApoSAA); systemic semile amyloid serum amyloid A protein (ApoSAA); systemic semile canyloid serum amyloid A protein (ApoSAA); systemic semile canyloid serum amyloid A protein (ApoSAA); systemic semile canyloid serum amyloid A protein (ApoSAA); systemic semile canyloid care are amyloid serum amyloid actaiomyopathy characterised by ATR fibrils derived from transthyretin (TTR); transmissible spongiform corent deposits; and beta-2-microglobulin deposits which form as a represent an immunogenic fusion protein comprising an amyloid beta composition to treat or prevent Alzheimer's disease.                                                                                                                                       from human LHRH. This is an example of peptides that can be used in claimed immunostimulatory complexes of the invention that are specifically adapted to act as adjuvant and as peptide immunogen munogen stabiliser. The complexes comprise a CpG oligonucleotide and a biologically active peptide immunogens. The complex is particulate and can to produce an immune response. The complexes may be prepared with various ratios of peptides to CpG oligonucleotides and prepared with various ratios of peptides to CpG oligonucleotides to provide different physical properties, such as the size of the microparticle. An immunostimulatory complex comprising the present LHRH derived peptide can be used in a vaccine for prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an immunostimulatory complex specifically adapted to act as adjuvant and as a peptide immunogen stabiliser. The invention is useful for preparing a water-in-oil emulsion, suspension vaccine. It is also useful for treating prostate cancer, hormone ablation, allergy, HIV infection, foot-and-mouth disease, etc. The
                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer),
 present sequence is human LHRH immunogenic peptide used in the invention.
                                                                                                                                                                                                                                                 Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAR82592-R82600 and AAR83560-R83581 are peptide immunogens that are useful in vaccines for treating allergic reactions. In the immunogens, an IGE CH4 peptide is attached C-terminally to a series of amino acids including a helper T cell epitope. The immunogen may also opt. contain a fatty acid or fatty acid derivative, an invasin domain or alpha-NH2. The immunogen produces high titres of antibodies to the effector site in human IGE heavy chain (the CH4 domain peptide) which inhibit mast cell activation and reduce allergen-induced IGE prodn. The immunogens may be arranged monomeric form
                                                                                                                                                                                                                                                                       ö
endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic peptide-based immunogen contg. IGE CH4 peptide and helper T cell epitope - useful for eliciting antibody prodn. for allergy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IGE; CH4; immunoglobulin; epsilon; immunogen; helper T cell; epitope; vaccine; allergy; antibody; constant heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention describes a compound (I) for the prevention and/or treatment of allergy. The compound comprises at least one allergen antigenic determinant (i) recognised by a B call or an antibody secreted by a B call of an antibody secreted ceraminant (ii) different from the allergen that triggers T cell activation. (I) has antiallergic, antiasthmatic, antimflammatory. dermatological and immunosuppressive activities, and can be used in a vaccine. (I) may be used in a pharmaceutical or cosmetic medicament to treat and/or prevent allergies or a disease of allergic origin, cspecially hypersensitivities. These include thintis, sinusitis, bronchial asthma, atopic dermatitis, some forms of acute and chronic urticaria, gastro-intestinal syndromes associated with the ingestion of food allergens, oro-pharyngeal syndrome, anaphylactic reactions cassociated with drug hypersensitivities and/or a mixture of these. The use of (I) in the treatment of allergic conditions avoids the need for drug treatment, which often causes undesirable side-effects. Also, prior
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New compound for prevention and treatment of allergies comprises at least one allergen antigenic determinant recognized by a B cell and at least one antigenic determinant which does not trigger T cell activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           art drug therapies alleviate symptoms, but do not influence their causes however (I) actually combats the cause of an allergic reaction. The present sequence represents a specifically claimed compound peptide sequence from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GRRH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GRRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (Of the breast, uterins and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRRH antibody titres. The present sequence is a synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                    Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper I-cell peptide epitope and immunomimic peptide epitope

The present invention describes a compound (I) for the prevention and/or treatment of allergy. The compound comprises at least one allergen anticalization of the prevention of anticalization of the comprises at least one allergen anticalization of the constant (I) recognised by a B cell or an anticalization of determinant (II) has anticalization that triggers T cell activation. (I) has anticalization anticalization can be used in a cernactological and immunosuppressive activities, and can be used in a vaccine. (I) may be used in a pharmaceutical or cosmetic medicament to treat and/or prevent allergies or a disease of allergic origin, benchial asthma, atopic dermatitis, some forms of acute and chronic uricaria, gastro-intestinal syndromes associated with the ingestion of cod allergens, oro-pharyngeal syndrome, anaphylactic reactions associated with drug hypersensitivities and/or amixture of these. The use of (I) in the treatment of allergic conditions avoids the need for drug treatment, which often causes undesirable side-effects. Also, prior art drug therapise alleviate symptoms, but do not influence thair causes, however (I) actually combats the cause of an allergic reaction. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New compound for prevention and treatment of allergies comprises at least one allergen antigenic determinant recognized by a B cell and at least one antigenic determinant which does not trigger T cell activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
atopic dermatitis; acute urticaria; chronic urticaria; gastro-intestinal syndrome; food allergen; oro-pharyngeal syndrome; anaphylactic reaction; drug hypersensitivity; allergic reaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence represents a specifically claimed compound peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Tetanus toxoid amino acids 830-844 and 947-967for fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antiparkinsonian; antibody therapy; Lewy body; alpha-synuclein; aggregation; brain; immunogenic response; beta-amyloid; Parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

```
Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytocxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequences (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRA, then optionally the invasin domain can be omitted from the immune stimulator component. The present sequence is an example of a cg-Gg-Th-GG-invasin immune stimulator to which a hapten can be bonded.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Helper T cell epitope; universal immune stimulator; invasin; hapten;
                                                                                                                                                                                                                                                                   Immunogenic luteinising hormone releasing hormone peptide(s) - that suppress LHRH activity in males and females.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method of preventing (M1) or treating a disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, by administering an agent that induces an immunogenic response against alpha-synuclein and/or beta-amyloid (Abeta) to a patient. (M1) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration improves motor characteristics of the patient. Alpha-synuclein or Abeta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alpha-synuclein aggregation. This sequence corresponds to a linear fusion of the tetanus toxoid peptide corresponding to amino acid 810-844 and 947-
                                                                                                                                                                                                                                                                            Preventing or treating disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in brain by administering agent that induces immunogenic response against alpha-synuclein and/or beta-amyloid.

                                                                                                                                                                                                                                                                                                                                Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic I lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HIA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid sequence from the invasin protein of Yersinia. Spacer amino acid sequence is allowed the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator components in the present sequence is an example of an invasin-GG-Th-GG-immune stimulator to which a hapten can be bonded.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The invention relates to a novel pharmaceutical composition for preventing or treating a disease characterised by amyloid fibril deposits (amyloid plaques) in a patient. The pharmaceutical composition comprises an agent that will induce an immune response against an amyloid component, or an antibody or antibody fragment that binds to an amyloid component. The invention also relates to a method for determining the component appared anyloid disorder which involves measuring a patient serum immunoreactivity against a selected amyloid component. A patient serum immunoreactivity of at least cfour times a base line serum immunoreactivity of at least cfour times a base line serum immunoreactivity of at least cfour times a base line serum immunoreactivity of at least cfour times a base line serum immunoreactivity control level indicates a prognosis of improved status with respect to the disorder. The cfour times a base line serum immunoreactivity control level indicates a prognosis of the invention are useful for treating a wide variety of disorders characterised by amyloid beta peptide fibrile Apposition in a familial deposition in a patient. Such disorders include Alabaimer's disease characterised by amyloidosis associated with systemic inflammatory diseases (e.g., rheumatoid arthritis, osteomyelitis, tuberculosis) characterised by AA fibrils derived from serum amyloid A protein (Apposably); systemic senile amyloid castum amyloid A protein (Apposably); systemic senile camploids and familial amyloid cardiomyopathy characterised by ATTR fibrils derived from transthyretin (TTR); transmissible spongiform corresponded from transthyretin (TTR); transmissible spongiform corresponded from beta-2-microglobulin deposits which form as a result of long term haemodialysis treatment. The present sequence compensation to treat or prevent Alabaimer's disease. (Updated on 11-SEP-CC 2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó
Pharmaceutical composition comprising immunogen against amyloid component such as fibril peptide or protein, or antibody against amyloid component useful for treating amyloid diseases or amyloidoses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Amyloid deposit; APP; Abeta; brain; human; clearing response; nootropic; Fc receptor mediated phagocytosis; immunogenic response; neuroprotective; amyloid precursor protein; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                This invention describes a novel method of preventing or treating a disease associated with amyloid deposits of amyloid precursor protein (APP) Abeta fragments in the brain of a patient, which comprises administering to the patient: (a) an antibody that binds to Abeta, the antibody binds to an amyloid deposit and induces a clearing response (FC receptor mediated phagocytosis) against it (b) a polypeptide containing an N-terminal segment of at least residues 1-5 of Abeta; or (c) an agent that induces an immunogenic response against residues 1-3 to 7-11 of Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The methods are useful for prophylactic and therapeutic treatment of
                                                                                                                      Preventing or treating a disease associated with amyloid deposits, especially Alzheimer's disease, comprises administering amyloid specific

Preventing or treating disease and as Parkinson's disease that careized by Lewy Dodies or alpha-synuclain and/or beta-amyloid.

Eagent that induces immunogenic response against alpha-synuclain and/or beta-amyloid.

Expectation of the paraly of the states of a method of preventing (WI) or treating a disease on immunogenic response against alpha-synuclain and/or beta-amyloid.

Expectation of administering an agent that induces an immunogenic response against alpha-synuclain and/or beta-amyloid.

Expectation of administering an agent that induces an immunogenic response against alpha-synuclain and/or beta-amyloid (Abeta) to a patient. (WI) is manufacturing an agent that induces an immunogenic response or against alpha-synuclain and/or beta-amyloid (Abeta) to a patient and administer to any administering and agent that induces among the brain of the patient. Alpha-synuclain or Abeta against alpha-synuclain and/or Sabata for a sequence or sequence characteristics of the patient. Alpha-synuclain or Abeta any sunctin and or administer to a method of the invention.

Expect and a sequence and any account of the search of the search of a fusion peptide used in the membrid of the invention.

Sequence 13 to Conservative 0, Mismatches 0, Indels 0, Gaps 0, Manuches 15; Conservative 0, Mismatches 0, Indels 0, Gaps 0, Manuches 15; Conservative expression of the patient of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the search of the searc

```
The invention relates to a novel pharmaceutical composition for preventing or treating a disease characterised by amyloid fibril deposits (amyloid plaques) in a patient. The pharmaceutical composition comprises an agent that will induce an immune response against an amyloid component, or an antibody or antibody fragment that binds to an amyloid component. The invention also relates to a method for determining the prognosis of a patient undergoing treatment for an amyloid disorder which involves measuring a patient serum amount of immunoreactivity against a prognosis of improved status with respect to the disorder. The cur times a base line serum immunoreactivity of at least four times a base line serum immunoreactivity of at least four times a base line serum immunoreactivity control level indicates a prognosis of improved status with respect to the disorder. The pharmaceutical compositions of the invention are useful for treating a wide variety of disorders include Alzheimer's disease characterised by aptent. Such disorders include Alzheimer's disease characterised by amyloid beta apptide fibril deposits; type 2 diabetes characterised by islete amyloid protein peptide (IAPP), amylin) fibrils; reactive systemic amyloid arthritis, osteomyelitis, tuberculosis) characterised by AT fibrils derived from serum amyloid A protein (AppSSA); systemic semile amyloid carthritis (e.g. Creutzfeld-Jakob disease, Kuru) characterised by prion protein deposits; and beta-2-microglobulin deposits which form as a result of long term haemodialysis treatment. The present sequence composition to treat or prevent Alzheimer's disease. (Updated on 11-SEP-COURCE 2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Amyloid deposit; APP; Abeta; brain; human; clearing response; nootropic; Fc receptor mediated phagocytosis; immunogenic response; neuroprotective; amyloid precursor protein; Alzheimer's disease.

ö This invention describes a novel method of preventing or treating a disease associated with amyloid deposits of amyloid precursor protein (APP) Abeta fragments in the brain of a patient, which comprises administering to the patient: (a) an antibody that binds to Abeta, the antibody binds to an amyloid deposit and induces a clearing response (Fc receptor mediated phagocytosis) against it (b) a polypeptide containing an N-terminal segment of at least residues 1-5 f Abeta; or (c) an agent that induces an immunogenic response against residues 1-3 to 7-11 of Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The Alzheimer's disease Preventing or treating disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in brain by administering agent that induces immunogenic response against alpha-synuclein and/or beta-amyloid. or treating a disease associated with amyloid deposits, Alzheimer's disease, comprises administering amyloid specific Gaps antiparkinsonian; antibody therapy; Lewy body; alpha-synuclein; aggregation; brain; immunogenic response; beta-amyloid; ö Fusion protein #29 for treating neurodegenerative disorder. The invention relates to a method of preventing (M1) or treating a disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, by administering an agent that induces an immunogenic response against alpha-synuclein and/or beta-amyloid (Abeta) to a patient. (M1) is

                                                                                                                                                                                                                                                                                    ô
useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration improves motor characteristics of the patient. Alpha-synuclein or Abeta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alphasynuclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gonadotrophin releasing hormone; GnEH; synthetic immunogen;

                                                                                                                                                                               The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinishing hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiseuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention
Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                androgen-dependent carcinoma; antitumour; infertility; tetanus toxin.

Cholesteryl ester transfer protein B cell epitope linked to T cell epitope - used to generate vaccine to regulate CETP activity for decreasing the risk of developing a cardiovascular disease e.g.

atherosclerosis.

Synthetic immunogenic peptides are provided in which a universal immune timulator is linked to a peptide or protein hapten containing B cell and/or cytotoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous helper T cell epitope (Th) which elicits an immune seaponse to the coupled peptide in members of a heterogeneous population expressing diverse HiA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yersinia. Spacer amino acid comains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin domain can be omitted from the immune stimulator and hapten components. The present sequence represents an LHRH-containing immunogenic peptide as above which can be used as a potent vaccine for treating e.g. prostatic hyperplasia, androgen-dependent carcinoma, prostatic carcinoma, testicular carcinoma, edemetriosis, (severe) commenstrual syndrome or oestrogen-dependent breast cancer, or for induction of infertility. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                         A multivalent vaccine comprises an immunogenic helper T-cell epitope of tetanus toxoid protein covalently linked to the B-cell epitopes of human cholesterryl ester transfer protein (CETP) (see also AAW06127). The vaccine elicits an immune response against endogenous CETP activity, and is used to treat or prevent a cardiovascular disease, such as

prognosis of a patient undergoing treatment for an amyloid disorder which prognosis of a patient undergoing treatment for an amyloid disorder which involves measuring a patient serum amount of immunoreactivity against a selected amyloid component. A patient serum immunoreactivity of at least four times a base line serum immunoreactivity control level indicates a prognosis of improved status with respect to the disorder. The prognosis of improved status with respect to the disorder. The wide variety of disorders characterised by amyloid fibril deposition in a patient. Such disorders include Alzheimer's disease characterised by islet amyloid beta peptide (InphP, amyloin) fibrils; reactive systemic amyloid beta peptide (InphP, amyloin) fibrils; reactive systemic amyloid osis associated with systemic inflammatory diseases (e.g., rheumatoid arthritis, osteomyelitis, tuberculosis) characterised by the fibrils derived from serum amyloid A protein (ApoSSA)); systemic senile amyloidosis and familial amyloid cardiomyopathy characterised by ATTR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                             The invention relates to a novel pharmaceutical composition for preventing or treating a disease characterised by amyloid fibril deposits (amyloid plaques) in a patient. The pharmaceutical composition comprises an agent that will induce an immune response against an amyloid component, or an antibody or antibody fragment that binds to an amyloid component. The invention also relates to a method for determining the
Pharmaceutical composition comprising immunogen against amyloid component
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fibrils derived from transthyretin (TTR); transmissible spongiform encephalopathies (e.g. Creutzfeld-Jakob disease, Kuru) characterised by prion protein deposits; and beta-2-microglobulin deposits which form as result of long term haemodialysis treatment. The present sequence represents an immunogenic fusion protein comprising an amyloid beta peptide fused to a universal T-cell epitope which may be used in a composition to treat or prevent Alzheimer's disease. (Updated on 11-SEP-
                          such as fibril peptide or protein, or antibody against amyloid component useful for treating amyloid diseases or amyloidoses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100.0%; Score 74; DB 4; Length 51; 100.0%; Pred.                                                                                                                              This invention describes a novel method of preventing or treating a disease associated with amyloid deposits of amyloid precursor protein (APP) Abeta fragments in the brain of a patient, which comprises administering to the patient: (a) an antibody that binds to Abeta, the antibody binds to an emyloid deposit and induces a clearing response (Fc receptor mediated phagocytosis) against it (b) a polypeptide containing an N-terminal segment of at least residues 1-5 f Abeta, or (c) an agent that induces an immunogenic response against residues 1-3 to 7-11 of Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Vaccine, drug delivery, encapsulation, human chorionic gonadotropin, HCG, tetanus toxoid, contraceptive.
                                          or treating a disease associated with amyloid deposits,
Alzheimer's disease, comprises administering amyloid specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Enhancing immunogenic response in mammalian subject by administering biodegradable polymeric delivery system comprising one or more antigens
                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

comprises administering an immunogenic response in a mammal comprises administering a biodegradable polymeric delivery system comprises administering a biodegradable polymeric delivery system as chighly preferred embodiment, the basic additive is MGCO3 and the bioghly preferred embodiment, the basic additive is MGCO3 and the biodegradable polymeric delivery system is a poly(lactide-co-glycolide) (PLGA) microparticle. The present sequence is that of the CTP37-TT2 antigen. This synthetic antigen comprises a B-cell epitope from the creatinal portion of the beta chain of human chorionic gonadotropin (HCG residues 109-145) and a universal or promiscuous T-cell epitope from the creatinal portion of the beta chain of human chorionic gonadotropin (HCG residues 109-145) and a universal or promiscuous T-cell epitope from the includes an N-terminal Cys residue to facilitate further conjugation via a thiol group without altering the B- and T-cell epitopes. In an example from the invention, the immunogenicity of CTP37-TT2 peptide antigen was shown to be enhanced by encaptuation or surface-conjugation in PuGA microparticles. Combination of surface-conjugated and encapsulated antigen cresponse after a single dose. The stability of the encapsulated antigen cresponse after a single dose. The stability guidelines for handling the dilute solution. This may provide stability guidelines for handling the contract of antigen in solution and for its potential use as a slow-release birth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Preventing or treating disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in brain by administering agent that induces immunogenic response against alpha-synuclein and/or beta-amyloid.

                                                                     the brain, by administering an agent that induces an immunogenic response against alpha-symuclein and/or beta-amyloid (Abeta) to a patient. (M1) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-symuclein aggregation in the brain, which involves administering agent that induces immunogenic response improves motor characteristics of the patient, and the administration improves motor characteristics of the patient. Alpha-symuclein or beta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alphasymuclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Generating an immune response to an antigen, useful for generating desired T cell responses comprises administering an immunoglobulin having one peptide epitope of the antigen attached to the immunoglobulin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method for generating an immune response to an antigen in a patient. The method comprises administering to the patient an immunoglobulin (Ig) or its portion where the Ig has at least one peptide epitope of the antigen attached to the Ig or its portion and administering the immunoglobulin or its portion in conjunction with a RMs segment. The present sequence is an antigen sequence, used to illustrate the invention.

(M1) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration improves motor characteristics of the patient. Alpha-synuclein or Abeta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alphasynuclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Preventing or treating disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in brain by administering agent that induces immunogenic response against alpha-synuclein and/or beta-amyloid.

The invention relates to a method for immunising animals (including humans) against autologous ghrelin. The method involves presenting ghrelin (or sub-sequence thereof) or a phrelin managous comprising a ghrelin B-cell epitope and non-ghrelin chemical moleties to the immune system, thereby inducing the production of antibodies against the animal's autologous ghrelin. The invention also relates to immunogenic compositions comprising ghrelin, a ghrelin sub-sequence or a ghrelin analogue of the invention; a nucleic acid encoding a ghrelin analogue of the invention; vectors and host cells comprising this nucleic acid; a method of identifying a modified ghrelin polypeptide capable of inducing antibodies against unmodified autologous ghrelin; and use of immunogenic compositions of the invention. The method of the invention is useful for reating, preventing or ameliorating obseity or other conditions characterised by excess body fat deposite by downrequiating ghrelin to such an extent that the total amount of body fat is significantly conditions treatment, prevention or amelioration of anorexia or cachexia. The method may also be used for upregulating ghrelin for treatment, prevention or amelioration of anorexia or cachexia. The method may also be used for treating ghrelin and ghrelin receptor.

The invention of preventing observation or burns, in advivant therapy for in a vitro fertiless and for treating ghrelin and ghrelin receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

```
The invention relates to a method for immunising animals (including humans) against autologous ghrelin. The method involves presenting ghrelin (or sub-sequence thereof) or a ghrelin analogue comprising a ghrelin for sub-sequence thereof) or a ghrelin analogue comprising a ghrelin for sub-sequence the immune system, thereby inducing the production of antibodies against the system, thereby inducing the production of antibodies against the analogue of the invention; a fixelin sub-sequence or a ghrelin analogue of the invention; a mucleic acid encoding a ghrelin analogue of the invention; a mucleic acid encoding a ghrelin analogue of the invention; a mucleic acid encoding a ghrelin analogue of the invention; a mucleic acid encoding a ghrelin sub-sequence or a ghrelin analogue of the invention; the invention is useful for treating, preventing or ameliorating obseity or other conditions compositions of the invention The method of the invention is useful for treating, preventing or ameliorating obseity or other conditions characterised by excess body fat deposits by downregulating ghrelin to decreased. The method may also be used for upregulating ghrelin for treatment, prevention or amelioration of anorexia or cachexia. The method may also be used for upregulating ghrelin for treatment, prevention are analoxation of anorexia or cachexia. The method

The invention relates to a method for immunising animals (including humans) against autologous ghrelin. The method involves presenting ghrelin (or sub-sequence thereof) or a phrelin analogue comprising a ghrelin paralogue comprising a ghrelin b-cell epitope and non-ghrelin chemical moieties to the immune system, thereby inducing the production of antibodies against the system, thereby inducing the production of antibodies against the compositions comprising a ghrelin. The invention is compositions and host cells acid encoding a ghrelin analogue of the invention; a nucleic acid encoding a ghrelin analogue of the invention; vectors and host cells comprising this nucleic acid; a method of identifying a modified ghrelin polypeptide capable of inducing antibodies against unmodified autologous ghrelin, and use of inducing antibodies against unmodified autologous ghrelin, and use of inducing antibodies against unmodified autologous ghrelin, and use of inducing compositions of the invention is useful for treating preventing or ameliorating obesity or other conditions contracterised by axcess body fat deposits by downregulating ghrelin to decreased. The method may also be used for upregulating ghrelin for the treatment, prevention or amelioration of anorexia or cachexia. The method creatment or treating wound or burns, in adjuvant therapy for in vitro fertilisation, and for treating ghrelin and ghrelin analogue comprising mature ghrelin with added epitopes used in an example of the
                                                                                                                                                      Ghrelin; autologous ghrelin; ghrelin analogue; immunogen; immunisation; anti-ighrelin antibody; obesity; anorexia; cachexia; wound; burn; adjuvant therapy; in vitro fertilisation; ghrelin-related cancer; ghrelin receptor-related cancer; anorectic; cytostatic; metabolic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunizing against autologous ghrelin in animals e.g. human beings, useful for treating obesity, by presenting ghrelin polypeptide, its subsequence or analog, to animal's immune system, for producing antibodies against ghrelin.
                                                                                                              Mature ghrelin with added epitopes (peptide 4), SEQ ID NO:16.
                                                                                                                                                                                                                                                  immunomodulator; vulnerary; vaccine; epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 1; SEQ ID NO 16; 83pp; English.

The invention relates to a method of preventing (M1) or treating a disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, by administering an agent that induces an immunogenic response against alpha-synuclein and/or beta-amyloid (Abeta) to a patient. (M1) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration improves motor characteristics of the patient. Alpha-synuclein or Abeta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alphashruclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Preventing or treating disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in brain by administering agent that induces immunogenic response against alpha-synuclein and/or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel method of preventing or treating a disease associated with amyloid deposits of amyloid precursor protein (APP) Abeta fragments in the brain of a parient, which comprises administering to the patient: (a) an antibody that binds to Abeta, the antibody binds to an amyloid deposit and induces a clearing response (Foreceptor mediated phagocytosis) against it (b) a polypeptide containing an N-terminal segment of at least residues 1-5 of Abeta; or (c) an agent that induces an immunogenic response against residues 1-3 to 7-11 of Abeta. The products of the invention have nootropic and neuroprotective activity. The method is also useful for monitoring a course of treatment being administered to a patient e.g. active and passive immunization. The methods are useful for prophylactic and therapeutic treatment of
                                                                                                                                                                                                                                                                                             Amyloid deposit; APP; Abeta; brain; human; clearing response; nootropic; Fc receptor mediated phagocytosis; immunogenic response; neuroprotective; amyloid precursor protein; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Preventing or treating a disease associated with amyloid deposits, especially Alzheimer's disease, comprises administering amyloid specific antibody.

```
The invention relates to a method of preventing (MI) or treating a disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, by administering an agent that induces an immunogenic response against alpha-synuclein and/or beta-amyloid (Abeta) to a patient. (MI) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration improves motor characteristics of the patient. Alpha-synuclein or Abeta is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alphasynuclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                              Preventing or treating disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in brain by administering agent that induces immunogenic response against alpha-synuclein and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        98. 109 / Notes "identical to residues 364-375 of human GDF-8"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method of preventing (MI) or treating a disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, by administering an agent that induces an immunogenic response against alpha-synuclein and/or beta-amyloid (Abeta) to a patient. (MI) is useful for preventing or treating a disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in the brain, which involves administering agent that induces immunogenic response against alpha-synuclein and/or Abeta to a patient, and the administration is useful in the manufacture of a preparation for simultaneous, separate or sequential treatment of disease characterized by Lewy bodies or alphasynuclein aggregation. This sequence corresponds to a fusion peptide used in the method of the invention.
                                                                                                                                                                                                                                                                               Preventing or treating disease such as Parkinson's disease characterized by Lewy bodies or alpha-synuclein aggregation in brain by administering agent that induces immunogenic response against alpha-synuclein and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                      The present sequence is that of AutoVac construct GDF-8 P2-3, comprising the 109 C-terminal amino acid residues of human growth differentiation factor 8 (GDF-8) in which residues 83-97 are replaced by the promiscuous tetanus toxin T-cell epitope P2 (see AAB20143). It is an object of the invention to produce a recombinant therapeutic vaccine that is capable of invention to produce a recombinant therapeutic vaccine that is capable of cate of farm animals. The vaccines (see AAB20145-5) are capable of breaking autotolerance against autologous GDF-8. They comprise the C-terminal portion of human GDP-8 in which a portion of the native sequence is replaced by a T-cell epitope such as P2, with minimal disturbance of the authentic 3-dimensional structure of the protein. Nucleic acids encoding the GDF-8 variants can be used for genetic immunisation of the animals. Down-regulation of GDF-8 activity can increase muscle mass by up conting the need for anitabiotic feed-additives. Anti-GDF8 vaccines can be used to treat human diseases such as cancer cachexia where muscle can be also the protein and content and chronic across the farm acute and chronic across the farm acute and chronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                        Increasing the muscle mass of animals used in meat production by down regulating growth differentiation factor 8 (GDF-8) activity in the animal through induction of anti-GDF-8 antibody production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "identical to residues 333-375 of human GDF-8"

the 109 C-terminal amino acid residues of human growth differentiation factor 8 (GDF-8) in which residues 52-66 are replaced by the promiscuous tetamus toxin T-cell epitope P2 (see AAB20143). It is an object of the invention to produce a recombinant therapeutic vaccine that is capable of effecting down-regulation of GDF-8 in order to increase the muscle growth reaking autoclolerance against autoclogous GDF-8. They comprise the C-terminal portion of human GDF-8 in which a portion of the native sequence is replaced by a T-cell epitope such as P2, with minimal discussance of the authentic 3-dimensional structure of the protein. Nucleic acids encoding the GDF-8 variants can be used for genetic immunisation of the animals. Down-regulation of GDF-8 activity can increase muscle mass by up reducing the need for antibiotic feed-additives. Anti-GDF8 varcines can be used for meat production, reducing the need for antibiotic feed-additives. Anti-GDF8 varcines can be used to treat human diseases such as cancer cachexia where muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Increasing the muscle mass of animals used in meat production by down regulating growth differentiation factor 8 (GDF-8) activity in the animal through induction of anti-GDF-8 antibody production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             present sequence is that of AutoVac construct GDF-8 P2-2, comprising

                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of AutoVac construct GDF-8 P2-1, comprising the 109 C-terminal amino acid residues of human growth differentiation factor 8 (GDF-8) in which residues 18-32 are replaced by the promiscuous tetanus toxin T-cell epitope P2 (See AAB20143). It is an object of the invention to produce a recombinant therapeutic vaccine that is capable of effecting down-regulation of GDF-8 in order to increase the muscle growth rate of farm animals. The vaccines (see AAB20145-53) are capable of breaking autotolerance against autologous GDF-8. They comprise the C-terminal portion of human GDF-8 in which a portion of the native sequence is replaced by a T-cell epitope such as P2, with minimal faturbance of the authentic 3-dimensional structure of the protein. Nucleic acids encoding the GDF-8 variants can be used for genetic immunisation of the coding the GDF-8 variants can be used for genetic immunisation of the coding the need for antibiotic feed-additives. Anti-GDF8 vaccines can be used to treat human diseases such as cancer cachexia where muscle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                     Increasing the muscle mass of animals used in meat production by down regulating growth differentiation factor 8 (GDF-8) activity in the animal through induction of anti-GDF-8 antibody production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    is pronounced and for patients suffering from acute and chronic

```
ö
The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and helminthic infections

Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or
                proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allorgic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention is concerned with methods of treating asthma, essinophila, allergic trinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Asthma, IL-5, interleukin-5, allergy, cytokine, helminthic infection, cancer, eosinophilia, vaccine, allergic rhinitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or
amelioration of asthma or other chronic allergic conditions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                       Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                        The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.

Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Asthma, IL-5, interleukin-5, allergy, cytokine, helminthic infection, cancer, eosinophilia, vaccine, allergic rhinitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention is concerned with methods of treating asthma, ecsinophilia, allergic trhintis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosimophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and
                                                                                                                                                                                                                                  Asthma, IL-5; interleukin-5; allergy; cytokine; helminthic infection; cancer; eosinophilia; vaccine; allergic rhinitis.

                                   Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition,
                                                                                                             The present invention is concerned with methods of treating asthma, eosinophilia, allergic thinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce cosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and

Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and helminthic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Asthma, IL-5, interleukin-5, allergy, cytokine, helminthic infection, cancer, eosinophilia, vaccine, allergic rhinitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention is concerned with methods of treating asthma, ecosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and helminthic infections
                                                                                                                                                                                                                                                               Asthma; IL-5; interleukin-5; allergy; cytokine; helminthic infection; cancer; eosinophilia; vaccine; allergic rhinitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Asthma, IL-5; interleukin-5; allergy; cytokine; helminthic infection; cancer; eosinophilia; vaccine; allergic rhinitis.

                                                                    The present invention is concerned with methods of treating asthma, eosinophila, allergic trhintis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and

```
Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                               The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and helminthic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     IL-5; interleukin-5; allergy; cytokine; helminthic infection;
eosinophilia; vaccine; allergic rhinitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention is concerned with methods of treating asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Score 74; DB 3; Length 126; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Down-regulating interleukin 5 (IL-5) activity in humans by administering IL-5 and/or an IL-5 analogue, useful in the treatment, prophylaxis or amelioration of asthma or other chronic allergic conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention is concerned with methods of treating asthma, eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and helminthic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Asthma; IL-5; interleukin-5; allergy; cytokine; helminthic infection; cancer; eosinophilia; vaccine; allergic rhinitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel pharmaceutical composition for preventing or treating a disease characterised by amyloid fibril deposits famyloid plaques) in a patient. The pharmaceutical composition comprises an agent that will induce an immune response against an amyloid component, or an antibody or antibody fragment that binds to an amyloid component. The invention also relates to a method for determining the prognosis of a patient undergoing treatment for an amyloid disorder which involves measuring a patient serum amount of immunoreactivity against a selected amyloid component. A patient serum immunoreactivity of at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Amyloid disease; amyloid fibril deposition; amyloid plaque; immunogenic; antibody; vaccine; Alzheimer's disease; type 2 diabetes; reactive system amyloidosis; systemic senile amyloidosis; familial amyloid cardiomyopathy; transmissible spongiform encephalopathy; Creutzfeld-Jakob disease; Kuru, haemodialyais-asssociated beta-2-microglobulin deposition; amyloid beta peptide; universal T-cell epitope; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pharmaceutical composition comprising immunogen against amyloid component such as fibril peptide or protein, or antibody against amyloid component useful for treating amyloid diseases or amyloidoses.
eosinophilia, allergic rhinitis and other allergic diseases. These involve the use of interleukin-5 (IL-5) analogues and modified IL-5 proteins and their coding sequences to down-regulate IL-5 activity and thus reduce eosinophil numbers. The allergic diseases may be treated using autovaccines, nucleic acid vaccines or live vaccines. In addition, it is possible that they may be used in the treatment of cancer and helminthic infections
                                                                                                                                                                                                                           Gaps
